# POST sbaconfig - action unjoindomain

---

## REST API Method: **POST /rest/sbaconfig?action=unjoindomain**

This action disconnects the SBA from the current active domain.

Ensure that the SBA is currently connected to a domain.

An HTTP Status 200 return for this action only means that the request was successfully received by the system. Status of the action must be retrieved using the [SBA Action Status Resource](#) .
