
GET emergencysvccallstatus

REST API Method: [GET /rest/emergencysvccallstatus](#)

Retrieves all resource schema elements and values of a Emergency Call Status Table.

If no Table ID is specified in the GET, a listing of all Emergency Call Status Tables will be returned along with their associated Table IDs. These table identifiers can be used to collect resource schema element values via the [GET emergencysvccallstatus id](#) method.
