

50	4	Hex offset to start of data. In this example, "0060".
54	13	SBC software revision. In this example, "V04.00.00".
67	29	Reserved
96	3	Event Log Type (same as file extension). In this example, "ACT".
99	16	File creation time.
115	12	Reserved
127	1	Header terminator (carriage return)

File Footer

The one line footer, below, is appended to each log file (including accounting logs) when the file is closed under controlled conditions.

```
DDMMYYYY HHMMSS: File administratively closed.
```

Controlled conditions include CLI commands (for example, `set oam eventLog typeAdmin acct rolloverAction...`) and automatic roll-overs when maximum file size is reached.

When an uncontrolled file closure occurs, such as an SBC switch-over or system failure, this footer may not be present.
