# POST savelogprofile

---

## REST API Method: **POST** /rest/savelogprofile

Submits a request to save the subsystems as a new log profile.

### URL:

https://192.168.0.111/rest/savelogprofile

### HTTP Method

POST

### Requires Authentication:

true

### Parameters

Parameter Name	Required	Service Affecting	Data Type	Default Value	Possible Values	Description
Description	Yes	No	string	none	64 - Max Length	Identifies the name of the new log profile.
LoggerIDList	No	No	string	none	64 - Max Length	Identifies the comma separated string of subsystem IDs to be copied into the new log profile. If no subsystems are mentioned, all subsystems will be copied.

#### Helpful Tip

The POST can contain either only the attributes that are being updated, or the full set of attributes for the resource
