
GET actionsettable id - actionsetentry id

REST API Method: GET

[/rest/actionsettable/{identifier}/actionsetentry/{identifier}](#)

Retrieves all resource schema elements and values of an Action Set Table Entry based on a requested Table Entry ID in a given [Action Set Table](#).

If no Table Entry ID is specified in the GET, a listing of all Action Set Table Entries will be returned along with their associated Table Entry IDs. These table entry identifiers can be used to collect resource schema element values via the [GET actionsettable id - actionsetentry id](#) method

URL:

<https://192.168.0.111/rest/actionsettable/{identifier}/actionsetentry/{identifier}>

HTTP Method

GET

Requires Authentication:

true

Parameters

Name	Required	Values	Description
filter	No	config	The type of filtered information in the response. If no filters are specified, all get applied.
