
GET logicalinterface id

REST API Method: **GET /rest/logicalinterface/{identifier}**

Retrieves all resource schema elements and values of a Logical Interface based on a requested ID.

If no ID is specified in the GET, a listing of all Logical Ports will be returned along with their associated IDs. These identifiers can be used to collect resource schema element values via the GET logicalinterface id method.

URL:

`https://192.168.0.111/rest/logicalinterface/{identifier}`

HTTP Method

GET

Requires Authentication:

true

Parameters

Name	Required	Values	Description
filter	No	config	The type of filtered information in the response. If no filters are specified, all get applied.
