Resource Schema

Configuration

Parameter Name	Required	Create	Read-Only	Data Type	Description
ID	Yes	Yes	Yes	int32	SUA configured ASP unique identifier. TL1Name: ID
IPAddress1	No	Yes	Yes	string	SUA Configured ASP primary address. This may be a hostname or an IP Address. If a hostname is used it must be provisioned either in /etc/hosts or via a properly-configured DNS Server and should resolve to a subset of the remote IP Addresses configured for the host where the ASP terminates. Hostname resolution is attempted periodically. This attribute defines the primary IP address specifying the SCTP primary path to the remote SCTP endpoint. If the resolution returns more than one IP address, no guarantee is made as to non-ambiguous definition of the SCTP primary path. TL1Name: IP1
IPAddress2	No	Yes	Yes	string	SUA Configured ASP secondary address. This may be a hostname or an IP Address. If a hostname is used it must be provisioned either in /etc/hosts or via a properly-configured DNS Server and should resolve to a subset of the remote IP Addresses configured for the host where the ASP terminates. Hostname resolution is attempted periodically. TL1Name: IP2
