
GET logprofilestable id - logsubsystemsentry

REST API Method: GET

[/rest/logprofilestable/{identifier}/logsubsystemsentry](#)

Retrieves all resource schema elements and values of a Log Profile Subsystem based on a requested Table Entry ID in a given [Log Profile Table](#).

If no Table Entry ID is specified in the GET, a listing of all Log Profile Subsystems will be returned along with their associated Table Entry IDs. These table entry identifiers can be used to collect resource schema element values via the [GET logprofilestable id - logsubsystemsentry id](#) method.
