
GET siplocalauthtable id - siplocalauthentry

REST API Method: GET

[/rest/siplocalauthtable/{identifier}/siplocalauthentry](#)

Retrieves all resource schema elements and values of a SIP Local Passthrough Authorization Table Entry based on a requested Table Entry ID in a given SIP [Local Passthrough Authorization Table](#).

If no Table Entry ID is specified in the GET, a listing of all SIP Local Passthrough Authorization Table Entries will be returned along with their associated Table Entry IDs. These table entry identifiers can be used to collect resource schema element values via the [GET siplocalauthtable id - siplocalauthentry id](#) method.
