
GET message transtable id - message transtable entry id

REST API Method: **GET**

`/rest/message transtable/{identifier}/message transtable entry/{identifier}`
`}`

Retrieves all resource schema elements and values of a Message Translation Table Entry based on a requested Table Entry ID in a given [Message Translation Table](#).

If no Table Entry ID is specified in the GET, a listing of all Message Translation Table Entries will be returned along with their associated Table Entry IDs. These table entry identifiers can be used to collect resource schema element values via the [GET message transtable id - message transtable entry id](#) method.

URL:
