
GET sipnatprefixtable id

REST API Method: **GET /rest/sipnatprefixtable/{identifier}**

Retrieves all resource schema elements and values of a SIP Qualified NAT Prefix Table based on a requested Table ID.

If no Table ID is specified in the GET, a listing of all SIP Qualified NAT Prefix Tables will be returned along with their associated Table IDs. These table identifiers can be used to collect resource schema element values via the [GET sipnatprefixtable id](#) method.
