
GET routingtable id

REST API Method: **GET /rest/routingtable/{identifier}**

Retrieves all resource schema elements and values of a Routing Table based on a requested Table ID.

If no Table ID is specified in the GET, a listing of all Routing Tables will be returned along with their associated Table IDs. These table identifiers can be used to collect resource schema element values via the [GET routingtable id](#) method.

URL:

`https://192.168.0.111/rest/routingtable/{identifier}`

HTTP Method

GET

Requires Authentication:

true

Parameters

Name	Required	Values	Description
filter	No	config	The type of filtered information in the response. If no filters are specified, all get applied.
