# GET bridge id - mstiportstats id

---

REST API Method: **GET**

**[/rest/bridge/{identifier}/mstiportstats/{identifier}](#)**

Retrieves all resource schema elements and values of a port associated with the MST Instance based on a requested row ID. The value of bridge ID must be 1.

If no ID is specified in the GET, a listing of all MST Instance/Port combinations will be returned with associated row ID. These identifiers can be used to collect resource schema element values via the [GET bridge id - mstiportstats id](#) method.

## URL:

<https://192.168.0.111/rest/bridge/{identifier}/mstiportstats/{identifier}>

## HTTP Method

GET

## Requires Authentication:

true

## Parameters

Name	Required	Values	Description
filter	No	statistics	The type of filtered information in the response. If no filters are specified, all get applied.
