# GET usergroup

---

## REST API Method: **GET /rest/usergroup**

Retrieves all resource schema elements and values of a AD Group to Access Level Mapping Table based on a requested Table ID.

 If no Table ID is specified in the GET, a listing of all AD Group to Access Level Mapping Tables will be returned along with their associated Table IDs. These table identifiers can be used to collect resource schema element values via the [GET usergroup id](#) method.

### URL:

<https://192.168.0.111/rest/usergroup>

### HTTP Method

GET

### Requires Authentication:

true

### Parameters

Name	Required	Values	Description
filter	No	config	The type of filtered information in the response. If no filters are specified, all get applied.
