
GET asmaclrule id

REST API Method: **GET /rest/asmaclrule/{identifier}**

Retrieves all resource schema elements and values of a Windows Firewall Rule Entry based on a requested ASM ACL Rule Entry ID.

If no ASM ACL Rule Entry ID is specified in the GET, a listing of all Windows Firewall Rule Entries will be returned along with their associated ASM ACL Rule Entry IDs.

URL:

`https://192.168.0.111/rest/asmaclrule/{identifier}`

HTTP Method

GET

Requires Authentication:

true

Parameters

| Name | Required | Values | Description |
|--------|----------|--------|---|
| filter | No | config | The type of filtered information in the response. If no filters are specified, all get applied. |
