
Configuring Sonus WebRTC Gateway

Configurations are achieved through the configuration files on the Sonus WebRTC in the following two ways:

- Creating a WRTC cluster in EMS and providing configuration to the cluster through EMS. For more information, refer to the [Configuring WRTC Using EMS](#).
- Configuring WRTC by editing the `startup.json` file. For more information, refer to the [Configuring WRTC without using EMS](#).
- Configuring WRTC through EMA in appliance installation. For more information, refer to the [Configuring WRTC Through Onboard Management](#).

The configuration page includes the following topics:

[Configuring WRTC Using EMS](#)

[Configuring WRTC Through Onboard Management](#)

[WRTC Connectivity Descriptions](#)
