
SG_M3UARoutingContext

Resource - M3UARoutingContext

About this Resource

Defines an M3UARoutingContext managed object.

REST API Methods for this Resource

- GET M3UARoutingContext
- POST M3UARoutingContext
- PUT M3UARoutingContext
- DELETE M3UARoutingContext

Resource Schema

Configuration

| Parameter Name | Required | Create | Read-Only | Data Type | Description |
|----------------------|----------|--------|-----------|-----------|---|
| RoutingContext | Yes | Yes | Yes | int32 | Routing context. TL1Name: RC |
| RemoteRoutingContext | No | No | No | RemoteRC | Remote routing context is used to connect a group of configured RCs. An ASP may go active for the group of RCs by sending a single ASP Active message containing only the remote routing context. All notifications and Acks pertaining to any AS in the group will contain the remote routing context. This feature should only be used when the ASP must send a single Routing Context but needs to register for more than one routing key. It can also be used in the case where a routing context is already configured for an AS and the ASP sends a different RC in the ASPAC message. To set the value to UNDEFINED, enter -1. TL1Name: REMOTERC |
