

Viewing ASM Operational Status

 Not supported by SBC SWe Lite in this release.

The Operational Status view contains the following status panels (from left to right):

1. Status - details the health and runtime status of the ASM.
2. Windows Status - details the host Windows operating system (and the list of currently connected remote desktop users).
3. Windows Update status - details when update packs need installing.
4. Sonus SBC Communication Service shows version and runtime details.
5. The operational status and runtime details of the Lync Services - useful when Deploying the SBA (Survivable Branch Appliance):
 - Skype Server, Mediation Service
 - Skype Server, Front-End Service
 - SQL Service
 - Skype Server, Replication
 - QoE Counters
 - (For units with CCE) Office 365™ CCE Status

Notes

- The **Service Status** field in the Sonus SBC Communications Service panel reflects the communication service state between the ASM and the SBC. If the ASM is shut down, communication becomes unavailable; the **Service Status** field is then marked as **Not Available**.
- The **ASM Board Status** reflects the electrical state of the ASM Board (**Up** or **Down**).

Viewing the Operational Status

This operation can be accessed either via the Tasks tab or Settings tab:

Figure 1: Tasks and Settings Tabs

Viewing the Operational Status

1. In the WebUI, click the **Tasks** or **Settings** tab.
2. In the left navigation pane, under the **Application Solution Module**, click **Operational Status**.

Figure 2: Operational Status: Unit Without a CCE
