

DSI Interoperability Matrix

Any new features associated with the software versions of compatible devices that are released after this device's software release date may not be supported on this platform. In order to take full advantage of feature content in a particular software release, ensure all Ribbon devices in your network are upgraded to this release. For example, in a network which includes GSX, PSX and EMS devices, all devices must have release 9.0.0 installed to utilize the full 9.0.0 feature set.

Exception:

SGX 09.00.00R000 requires a minimum Insight release of 09.01.00R000 for new functionality and trap support.

When upgrading your network, be sure to upgrade each product to the most current release in order to take advantage of the latest features, enhancements and fixes. See the associated interoperability matrix for that product's latest release version.

This page lists the minimum compatible release versions of each Sonus device that can interoperate with the DSI platform. All later versions of these compatible devices are also supported unless explicitly stated otherwise.

DSI		ASX	GSX 9000	EMS	NetScore	SBC 5000 Series	SBC 7000 Series	SBC SWe
