

# GET routingentry historicalstatistics id

REST API Method: **GET**

**/rest/routingtable/{identifier}/routingentry/{identifier}/historicalstatistics/{identifier}**

This action retrieves the historical statistics for a given [Call Routing Entry](#) in the SBC Edge system. The collections are over 1 hour intervals for a period of 1 day, thus giving a maximum of 24 historical records.

 The current interval is always the resource with ID 1. There will be a maximum of 25 rows returned for a lookup, where the row with ID 1 is the current interval being collected and the rows with ID 2-25 are the historical collections.

 If no ID is specified, a listing of all collections will be returned along with their associated IDs. These identifiers can be used to get the individual resource element values.
