SIP Transport
TCP, TLS and SCTP

Ingress SIP transport type acceptance is configured on a SIP trunk group basis with specific parameters configurable on a SIP trunk basis. Egress SIP transport type is configured through the Egress IP signaling profile in the SBC or on a SIP trunk basis, or may be determined by a DNS NAPTR (Name Authority Pointer) query.

Additional topics in this section:

- SIP over SCTP
- SIP over TCP
- SIP Over TLS
- SIP over UDP
