
GET linkmonitor id - linkmonitorcounters

REST API Method: GET

[/rest/linkmonitor/{identifier}/linkmonitorcounters](#)

Retrieves all resource schema elements and values of Link Monitor Counters Object based on a requested Table ID.

If no Table ID is specified in the GET, a listing of all Link Monitor Counters will be returned along with their associated Table IDs. These table identifiers can be used to collect resource schema element values via the [GET linkmonitor id - linkmonitorcounters id](#) method.
