

Log Exchange - LX 1.0

✔ LX is available **free of charge** for all customers and partners with a license agreement.

For **Release Notes** and **File Download** information, please visit the [Global Services Toolbox](#).

Log Exchange (LX) is a multipurpose debugging tool for the SBC 1000/2000, SBC 5000 series, and VX series gateways.

LX parses log files and displays SIP call flows, ISDN call flows, and advanced call details in real-time - making it easy for end-users to analyze and troubleshoot issues.

When using the SBC 1000/2000, users have the ability to parse log messages on the fly using LX's built in Syslog listening capabilities.

Log Exchange Screenshot

The screenshot displays the NET LX application window. The main window title is "NET LX" and it has a menu bar with "File", "Call Settings", "Editor", "Parse Syslogs OFF", "Syslog Server", and "Help". Below the menu bar is a table with the following columns: "Ar...", "Dire...", "Received Time", "Peer IP", "Pee...", "UX IP", "UX P..", and "Method". The table contains 7 rows of data:

Ar...	Dire...	Received Time	Peer IP	Pee...	UX IP	UX P..	Method
1	Rec...	2012-01-24 16:57...	134.56.105.233	3072	134.56.72.218	5060	INVITE sip:6239...

Below the main table is a "Calls" section with tabs for "SIP Debugs", "CCC Debugs", and "MSC Debugs". The "SIP Debugs" tab is active, showing a smaller version of the same table with one row:

Ar...	Dire...	Received Time	Peer IP	Pee...	UX IP	UX P..	Method
1	Rec...	2012-01-24 16:57...	134.56.105.233	3072	134.56.72.218	5060	INVITE sip:6239...

At the bottom of the window, it says "Ready. 17 Messages found".
