

Global - Call Resource Detail Status

This object displays the Call Resource Detail Status.

On SBC main screen, go to **All > Global > Call Resource Detail Status**. The Call Resource Detail Status window is displayed.

Figure 1: Global - Call Resource Detail Status

By default only ten entries are displayed in a view. You can choose the number of entries to be displayed under the **Show entries** drop down box.

The following fields are displayed:

Table 1: Global - Call Resource Detail Status Parameters

Parameter	Description
GCID	Identifies the call id that has to be terminated.
Res Index	Target resource index to access details within the call.
Res ID	Internal resource identifier that uniquely the resource.
Res Type	Resource type for this resource.
Call ID	Global Call identifier (GCID) for the call to which this resource is allocated.
Leg ID	The call leg ID on which this resource resides.

 When the call volumes are high, EMA takes approximately 30 seconds to display the output.
