

SBC 1000-2000-SWe Lite Interoperability Matrix

This page lists the minimum compatible release versions of each Ribbon device that can interoperate with the SBC 1000 - 2000 and SWe Lite platforms. All later versions of these compatible devices are also supported unless explicitly stated otherwise.

Any new features associated with the software versions of compatible devices that are released after this device's software release date may not be supported on this platform. In order to take full advantage of feature content in a particular software release, ensure all Ribbon devices in your network are upgraded to this release.

Tip

When upgrading your network, be sure to upgrade each product to the most current release in order to take advantage of the latest features, enhancements and fixes.

SBC 1000-2000

The following table lists the release versions which support the SBC Edge platform. Two software releases (labeled as **Latest** and **Minimum**) of each product are associated to each SBC Edge release version in the table.

All later versions of these compatible devices are also supported unless explicitly stated otherwise.

- **Latest** release indicates the release version to use on the platform in order to ensure availability of the latest features and functionality.
- **Minimum** release indicates the minimum compatible product release version for backwards compatibility verification.
