

# NetScore Interoperability Matrix

This page lists the minimum compatible release versions of each Ribbon device that can interoperate with the NetScore platform. All later versions of these compatible devices are also supported unless explicitly stated otherwise.

 Any new features associated with the software versions of compatible devices that are released after this device's software release date may not be supported on this platform. In order to take full advantage of feature content in a particular software release, ensure all Ribbon devices in your network are upgraded to this release. For example, in a network which includes PSX and EMS devices, all devices must have release 13.0.0 installed to utilize the full 13.0.0 feature set.

 When upgrading your network, be sure to upgrade each product to the most current release in order to take advantage of the latest features, enhancements and fixes. See the associated interoperability matrix for that product's latest release version.

NetScore	Latest/ Minimum	DSI (Linux)	EMS	GSX 9000	PSX	SBC 5000 Series	SBC 7000 Series	SBC SWe
